TECHNICAL SKILLS

Languages

- Java
- Python
- JavaScript
- SQL

Frontend

- React.js
- HTML5 & CSS3

Frameworks & Tools

- OpenCV
- YOLOv8 / YOLOv7
- ESP32 & Arduino
- Blynk IoT
- Git & GitHub

CORE STRENGTHS

- Logical Reasoning
- Problem Solving
- Quick Learner
- Team Collaboration
- Adaptability
- Attention to Detail
- Time Management

LANGUAGES

English

Professional Proficiency

Telugu

Native

Hindi

Conversational

LOKESH TEDDU

Software Developer • Software Engineer • Fresher

PROFESSIONAL SUMMARY

Motivated and detail-oriented Software Engineer (Fresher) with a B.Tech in Computer Science & Business Systems. Experienced in building real-world applications using deep learning, IoT, and full-stack technologies. Passionate about writing clean, efficient code and eager to contribute to impactful software products within a collaborative engineering team.

EDUCATION

Gokaraju Ranga Raju Institute of Engineering & Technology

2020 – 2024

B.Tech – Computer Science & Business Systems | CGPA: 7.37 / 10

SR College, Hyderabad

2018 – 2020

Intermediate (MPC) | CGPA: 9.6 / 10

Telangana State Residential School

2017 – 2018

SSC X | CGPA: 8.8 / 10

PROJECTS & DEVELOPMENT WORK

NextGen Traffic Surveillance & Control System

Feb – Mar 2024

Stack: Python, YOLOv8/YOLOv7, OpenCV, Deep Learning

- ▶ Built a real-time deep learning traffic surveillance system detecting accidents, violations, and congestion from CCTV footage using YOLO object detection models.
- ▶ Developed an automated e-challan generation pipeline integrating OCR-based license plate recognition for instant, contactless traffic violation logging.
- ▶ Designed an adaptive traffic signal control module that dynamically optimizes signal timings based on live traffic density, improving road throughput measurably.
- ▶ Benchmarked YOLOv7 vs. YOLOv8, fine-tuning hyperparameters to maximize detection accuracy while maintaining real-time processing speeds on standard hardware.

Air Quality & Hazardous Gas Detection System (IoT)

Jan – Apr 2023

Stack: ESP32, MQ135, MQ2, Blynk IoT, Arduino

- ▶ Designed and deployed an IoT air quality monitoring system using ESP32 with MQ135 and MQ2 sensors for continuous multi-gas detection in indoor and industrial settings.
- ▶ Accurately measured PPM concentrations of CO, LPG, NH3, smoke, and hydrocarbons with real-time threshold-based alerting for occupational safety compliance.
- ▶ Integrated Blynk IoT mobile dashboard for live telemetry visualization and instant push notifications when gas levels breached configurable safety thresholds.
- ▶ Built intelligent rule-based logic mapping gas concentrations to contextual health advisories, improving user safety response times in hazardous environments.

DECLARATION

I hereby declare that all information furnished above is true and accurate to the best of my knowledge and belief.
